Name: _Claudio Panebianco_

SQL SELECT, WHERE, DISTINCT practice

1. Write a select statement to return all columns and rows from the customer table.

SELECT * FROM customer;

2. Write a query to select first name, last name, and email from the customer table.

SELECT first_name, last_name, email FROM customer;

3. Write a query to return all rows and columns from the film table.

SELECT * FROM film;

4. Write a query to return unique rows from the release_year column in the film table.

SELECT DISTINCT release_year FROM film;

5. Write a query to return unique rows from the rental_rate column in the film table.

SELECT DISTINCT rental_rate FROM film;

6. A customer left us some feedback about our store. Write a query to find her email address – for Nancy Thomas.

SELECT First_name, last_name, email FROM customer WHERE first_name = 'Nancy';

7. We're trying to find a customer located at a certain address '259 Ipoh Drive' – can you find their phone number?

SELECT phone, address FROM address WHERE address = '259 Ipoh Drive';

8. Write a query from the customer table, where store_id is 1 and address_id is greater than 150.

SELECT store_id, address_id From customer WHERE store_id= 1 and address_id > 150;

9. Write a query from the payment table where the amount is either 4.99 or 1.99.

SELECT payment_id, amount FROM payment WHERE amount = 4.99 OR amount = 1.99 ORDER BY amount ASC;

10. Write a query to return a list of transitions from the payment table where the amount is greater than 5.

SELECT payment_date, amount FROM payment WHERE amount > 5 ORDER BY amount ASC;
